It reduces employment in many fields.

B.

It makes more diverse products available.

C.

It causes industries to decline.

D.

It makes countries dependent on foreign powers.

A foreman for an injection-molding firm admits that on 9% of his shifts, he forgets to shut off the injection machine on his line. This causes the machine to overheat, increasing the probability that a defective molding will be produced during the early morning run from 1% to 19%. Let F = forgets to shut off the injection machine and D = defective. Use a probability tree to answer the following questions: (Round all answers to four decimals) a) What is the probability a molding from the early morning run is defective? b) The plant manager randomly selects a molding from the early morning run and discovers it is defective.

What is the probability that the foreman forgot to shut off the machine the previous night?

Macbeth thought he heard someone say, "Macbeth hath murdered Sleep." Question 21 options: 1) True 2) False
