

A certain species of animal represents just 3 percent of the biomass in its ecosystem. we might classify this as a keystone species if its elimination

Keystone species are those species on which organisms living in that ecosystem largely depend upon. Elimination of keystone species can lead to adverse effects on the organisms living there and the diversity of that community gets decreased. Thus, a keystone species play an important role in maintaining the stability in the ecosystem.

Fabian Harvey says 10 pounds of tomatoes from his garden he needs to to face pounds to make a batch of soup if he sets aside 2.8 pounds of tomatoes to make spaghetti sauce how many batches of soup can Fabian make

- commander of a Virginia regiment in French and Indian War · tobacco plantation owner
