

Write 0.52 as a percentage and a fraction in its simplest terms

52% Fraction in simplest form: $\frac{13}{25}$

25

One time I read it said 6% is equal to 0.06, so I believe it's da same for 0.52, and first you write da fraction as 52/100, then you divide 52 and 100 by 2 which gets you 26/50, and then you divide both by 2 to get 13/25. I hope I helped :-)

a jewellery shop sells 240 necklaces in a month. 180 of the necklaces were sold via the shop's website, the rest were sold in a high street shop. work out the ratio of online sales to the shop sales. give your answer in its simplest form

B. what is the monthly surplus created in the wholesale butter market due to the price support (price floor) program?

Rita works at a gym where she gets paid \$450 each week plus \$15.50 for any new gym membership she sells. If y represents the total pay per week and x represents the number of new memberships sold, which of the following equations represents a higher rate per membership sold?
